AntexCloud improves contracts approval chain in Farvater construction company with Office 365 based solution

PSK Farvater • Construction industry

Farvater is a large **construction holding** company that **employes over 1000 professionals**. It **has over 50 projects** in Russia, including high-profile sites in Moscow like «Luzhniki» olympic stadium, «Gelikon Opera» musical theatre and «Zaradye» modern city park.

Farvater constructs and develops large-scale business and residential complexes (including external networks) and even produces various types of ventilation equipment.

«Luzhniki» olympic stadium, Moscow, Russia

«Gelikon Opera» musical theatre, Moscow, Russia

AntexCloud offered us a solution that has streamlined documents approval process between projects and legal departments. The decision to use **Microsoft Office 365** *as a platform has saved a lot of time, and also decreased the cost of the resulting document management solution.*

Custom-tailored software developed by **AntexCloud** *meets all the expectations, is easily scalable, and has all the features we expected from the ECM software. We especially highlight quick response to our inquiries regarding any issues that might happen during software use.*

– *"PSK Farvater"*

Office 365

Problem description

Each year the company saw continued increase in number of customers and subcontractors; the variety of services offered also grew. At some point it was necessary to interact with over 40 providers of specialized engineering equipment simultaneously, which (obviously) had taxed the amount of resources the legal department had available: the amount of custom-tailored contracts skyrocketed, while they still had to be compliant with internal corporate policies regarding their contents and approval process. Most of all the company needed that the contracts be reviewed and approved with the appropriate (designated) employees, while for each contract the multi-level approval chain could be unique. After that the documents had to be kept in a safe, reliable storage space with the ability to be quickly found when needed.

After reviewing several options, Farvater has decided to go for the **Microsoft Office 365** platform, which has a rather unique set of tools for data creation and processing in a corporate environment, thanks to **SharePoint Online**. This prompted to get in touch with AntexCloud, a gold certified Microsoft Partner that specializes in development of business applications for Office 365, including document management solutions.

Products & technologies used:

- Microsoft Office 365
- SharePoint Online

Company highlights:

- construction holding
- 50 offices
- 1000 employees

The process

As a first step Farvater has decided to try **AntexCloud Agreements Manager**, the free version of contracts management solution – it can be effortlessly installed within a day (by any company that has active Microsoft Office 365 subscription).

After the would-be users have tried in action the application and its abilities to automate business processes based on **Office 365**, they have positively valued that it met their business requirements. Following that, they've made the decision to adopt it as a daily business tool.

After about half a year, Farvater asked us to develop an improved, custom-tailored version according to specific needs and well thought-through wishes of the legal department, in order to save time and streamline many business processes that require contracts approval.

The results

Deployment of custom-tailored documents approval solution designed by **AntexCloud**, enabled Farvater to speed up the contract approval process and at the same time simplify it (even though the approval chain is often unique). The legal department is happy that the approval process is now visual: the person that submits a document for approval, now always knows its exact status (and can resolve bottlenecks should they occur).

The solution enjoys all the benefits of **SharePoint**, like secure document storage; documents are now at fingertips of users that have access permissions.

The solution now completely avoids use of paper copies, and mobile nature of **Office 365** architecture allows approve documents even to those employees in the chain that are travelling or out of office.
